

Lab 04 - Prompt and Specification Pack

Masking, Inpainting, Outpainting and Background Swap Generative AI for Image and Video Creation
(TGS-2020505925) | Version v11.0 | 6 September 2026

The generative edit prompts below pair one-for-one with the three masks you built. Each states the mask semantics explicitly, because an edit request without stated mask semantics is ambiguous and can be interpreted incorrectly.

Currency note. Model identifiers and API parameters quoted anywhere in this pack were verified against the official vendor documentation on 6 September 2026. Model IDs change; re-verify before relying on one. Identifiers known to be deprecated are marked as such rather than quietly removed, so you can recognise them in older material.

Job 1 - inpaint removal (mask-based)

```
{
  "job": "remove-price-tag",
  "edit_mode": "inpaint_removal",
  "base_image": "reference/nq-jacket-square.png",
  "mask_image": "out/mask_tag.png",
  "mask_semantics": "white = editable, black = preserved",
  "mask_dilation_kernel": "5x5 ellipse, 2 iterations (approximately 4 px reach)",
  "prompt": "continue the jacket shell fabric and its weave across the masked region; match the existing seam direction, sheen and shadow falloff",
  "preserve": ["jacket silhouette", "collar", "backdrop", "all lighting"],
  "acceptance": {"metric": "outside_mask_mean_abs_diff",
    "max": 0.5, "units": "intensity levels, 0-255"}
}
```

Job 1b - the mask-free alternative, for comparison only

```
{
  "job": "remove-price-tag-maskfree",
  "edit_mode": "default",
  "base_image": "reference/nq-jacket-square.png",
  "prompt": "remove the yellow price tag from the jacket; change nothing else",
  "note": "the model infers its own edit region. Faster to author, but the preserved region is inferred rather than guaranteed. Verify all preserved details before use in a commercial master."
}
```

Job 2 - background swap

```
{
  "job": "swap-background-harbour",
  "edit_mode": "background_swap",
  "base_image": "reference/nq-jacket-square.png",
  "mask_image": "out/mask_bg.png",
  "mask_semantics": "white = background (editable), black = subject (preserved)",
  "prompt": "a harbour boardwalk at first light: wet timber decking, mooring bollards mid-ground, rigging and low cloud beyond; match the existing warm key from camera left and keep the subject's cast shadow consistent with it",
  "preserve": ["subject pixels", "subject edge", "jacket colour"],
  "acceptance": {"metric": "subject_hsv_bhattacharyya_vs_source",
    "max": 0.15}
}
```

Job 3 - outpaint to approximately 16:9

```
{
  "job": "outpaint-1x1-to-16x9",
  "edit_mode": "outpaint",
  "canvas": {"width": 1820, "height": 1024,
    "source_placed_at_x": 398, "source_size": 1024},
  "mask_image": "out/mask_outpaint.png",
  "mask_semantics": "white = new canvas (editable), black = original (preserved)",
  "prompt": "continue the harbour boardwalk left and right: the same decking planks running to the frame edges, further bollards, and the same low cloud horizon line held level",
  "preserve": ["the original 1024 central columns, bit-identical"],
  "acceptance": {"metric": "central_1024_columns_identical",
    "expected": true}
}
```

Review-gate wording to attach to any masked edit

An edit is accepted only when ALL of the following hold:

1. the stated acceptance metric is within threshold;
2. the preserve list is verified, not asserted;
3. the mask semantics recorded here match the semantics the API applied;
4. the output provenance (model + prompt version, or SIMULATED) is recorded.
